

COMPRESSED AIR LEAKS

**COMMERCIAL AND INDUSTRIAL
ENERGY EFFICIENCY**

Air isn't free

Idaho Power's Commercial and Industrial Energy Efficiency Program has incentives available to support compressed air system leak repairs. This program is available to any businesses looking to implement low- or no-cost energy savings projects at their facilities and have an opportunity to repair their compressed air system leaks.

Reduce your energy costs without capital projects

Incentives are available from Idaho Power for capital projects resulting in electrical energy savings. However, the focus of this effort is on compressed air system leaks that are often overlooked and don't require more than leak detection, labor to repair leaks and realize savings. Customers will receive an incentive of \$0.025 per kilowatt-hour (kWh) saved annually up to 100% of the eligible project cost for participating in the program.

Benefits

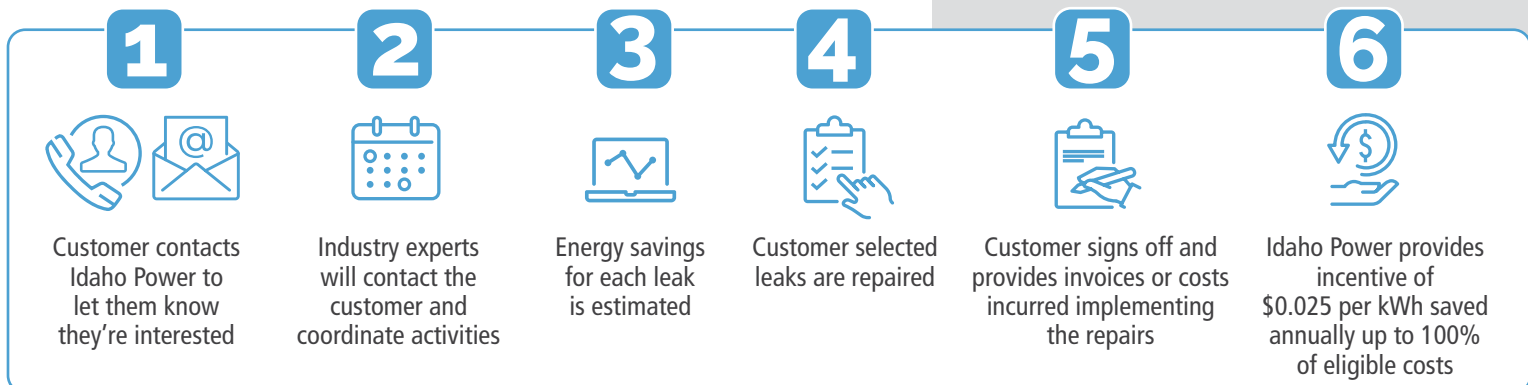

Compressed air leak repairs can also lead to non-energy benefits such as:

- Improved safety and security
- Increased air compressor capacity
- Better equipment performance
- Extended equipment life
- And more!

Program Requirements

- Compressor(s) power must total 100 horsepower (hp) or more
- Provide access to facility and time for the appropriate facility personnel to assist with data collection during all phases of the project

Air Leaks Process

Terms and conditions apply. Actual savings will vary by customers' energy use, rate schedule and implemented opportunities.

Other Compressed Air Incentives

Equipment upgrades may be eligible for Custom Projects incentives of \$0.20 per kWh saved annually up to 70% of eligible costs.

More information on those incentives can be found at idahopower.com/customprojects.

In addition, check out prescriptive measures for compressed air systems. More information can be found at idahopower.com/retrofits or idahopower.com/newconstruction.
