

FIND N' FIX

**COMMERCIAL AND INDUSTRIAL
ENERGY EFFICIENCY**

customprojects@idahopower.com

Overview

Idaho Power's Find n' Fix program is offered to any businesses looking to implement low- or no-cost energy savings projects at their facilities. The program educates customers about energy management opportunities and is focused on making small, energy-saving adjustments to the facility's central HVAC control system to maximize energy efficiency and occupant comfort.

Reduce your energy costs without capital projects

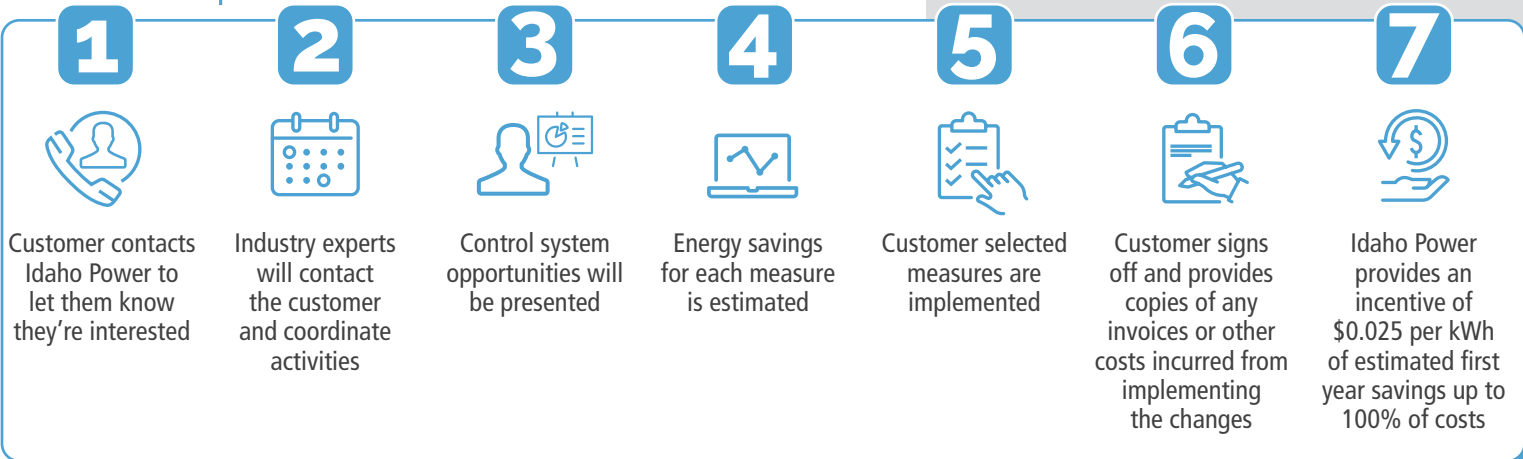

Incentives are available from Idaho Power for capital projects resulting in electrical energy savings. However, the Find n' Fix program focuses on control system improvements that often require minimal labor to adjust control parameters or low-cost system repairs to realize immediate savings. Customers will receive an incentive to offset any incurred costs at \$0.025 per kilowatt-hour (kWh) of first year savings up to 100% of the eligible project cost for participating in the program.

Optimize building controls

Customers contact their energy advisors and industry experts will be deployed to coordinate activities. This typically results in energy-saving recommendations to central building control systems that can be implemented right away. These adjustments can also lead to non-energy benefits such as:

- Improved comfort
- Improved safety and security
- Better indoor air quality
- Extended equipment life
- And more!

Find n' Fix process

Terms and conditions apply. Actual savings will vary by customers' energy use, rate schedule and implemented opportunities.

Program goals

- Help participants reduce their current energy footprint through HVAC control system adjustments.
- Provide a quick, easy way to realize immediate energy savings at little to no-cost.
- Educate participants on how to maintain energy savings from implemented measures over time.
