## SCHEDULE A: ADDITIONAL INFORMATION REQUEST OP-1 NAVIGATION OPERATIONAL SCENARIO

*Time Required: 9 months*

(c) Navigation

Since reduced flow fluctuations or higher flows may affect navigation conditions, please use your operational models to simulate river flows and stage changes for each of the 5 representative years (1992, 1994, 1995, 1999, and 1997). For each year and for each scenario, provide the following data plots:

- (i) River flows as predicted for the Hells Canyon Dam gage (no. 13290450) (1-hour intervals, year-round);
- (ii) River flows as predicted for the China Gardens Rapids gage (no. 13317660) (1-hour intervals, year-round); and
- (iii) Hourly change in river stage (feet per hour) as predicted for the Johnson Bar gage (no. 13290460) (year-round).

Each of the foregoing graphs should be provided in a full-page, black-and-white format to ensure that all data series are visible in both hard copy and electronic formats. To facilitate side-by-side comparison, please provide the same information for your current and proposed operations in the same scale and format as for the other scenarios.

### 1. INTRODUCTION

Agency review of the Idaho Power Company (IPC) license application for the three-dam Hells Canyon Complex (HCC, which includes the Brownlee, Oxbow, and Hells Canyon projects) resulted in requests to the Federal Energy Regulatory Commission (FERC) for additional studies. FERC evaluated these study requests and formulated a list of additional information requests (AIRs) to help in determining potential project-related impacts resulting from these IPC hydroelectric projects. This document addresses AIR OP-1(c), quoted above.
